

## **Echo Glass Switch and Spey**

With so many manufacturers barking the benefits of increasingly faster actions, it's not surprising that veteran rod designer Tim Rajeff would ask "why follow the flock"? All new for 2015, Echo introduces the first major production run of fiberglass Spey and Switch rods in the industry. Why fiberglass? Good question.

Fiberglass recovers more slowly than graphite, giving the caster a better sensation of how the line is loading the rod. Improved feedback through the casting cycle results in a fun, effortless, bug launching. Echo Glass Spey and Switch rods feature sensitive tips to protect tippet when slinging surface patterns on a dry line, and plenty of "sneaky power" to catapult long, heavy sink tips with ultimate ease. Steelheaders looking to increase their "hook-to-hand" ratio will be impressed with the way these rods absorb the energy of active, unpredictable fish.

With release scheduled for early January 2015, the Echo Glass Switch and Spey series will be available in the following weights/lengths: Switch - 3wt in 10'6", 4wt in 10'8", 6wt in 11', and 7wt in 11'. Spey - 6wt in 12'4", 7wt in 12'9", and 8wt in 13".
